Ideation

Big idea:
House that knows what to do in a serious situation

Solutions:

1. **Home security**
   Robots that patrol the house and can act in a serious situation (like calling the police)

   The problem with most security system cameras is that they're fixed in place. We have come up with a set of small patrol robots that can move around a designated area and detect suspicious movement. Our robots consist of a wall climbing car that can move itself around walls and even ceilings by being suctioned to them.
   when it detects any threat the police will be called after the user has confirmed that it is indeed a threat.
   If you have enough money you can opt for the Drone package where you will get a drone that will fly around your house.

2. **Mental health**
   A therapy app that helps Kara deal with her anxious feelings

   Instead of focussing on her home security we think the best way to help Kara is to help her with her anxious thoughts. Our app would help Kara to change the way she thinks about anxiety. It could encourage Kara to take charge of her life and face challenging situations. The app will also be made in a way that it is comforting to use and doesn't scare off any possible users.

We have decided focussing on psychology is not the approach we want to take because we think home security is a more interesting topic for us. It leads to more interesting features in our app
